- ♦ PEP 2002 program - One time charge. Version updates are free.
- ♦ WEBPEP Program - Connect to **your** data on **your** server via a browser (no client installs).  
Note: This is for employee self evaluations and will soon available for evaluators.
- ♦ Concurrent Users - This is a one time charge for the amount of users on the system at the same time. Note: The program can be installed on any number of machines.
- ♦ Advantage - This is a true SQL Client/Server software. We recommend this easy to install software for customers with 10 or more concurrent users.
- ♦ Template forms - Use if employees prefer to use a manual form. PEP will print evaluation criterea on the form for manual input at a later time.
- ♦ Scoring units - This is the only ongoing charge. There is no annual fee.

## Advantage Database Server North American Price Guide

April 09

### Advantage Internet Connector

The Advantage Internet Connector is a license that allows an unlimited number of Internet users access to a single copy of the Advantage Database Server software (the small business edition is limited to 10 concurrent connections). An Internet user is any person using an application that interacts with a Web server or middleware software product via an Internet connection to gain access to data from an Advantage Database Server. The Web server or middleware must be a product that physically interacts with the data on behalf of the remote Internet user, rather than just a router or VPN-like product that simply routes the data between the remote client machine and the Advantage Database Server. You must purchase an Advantage Internet Connector license for each server that is running the Advantage Database Server and is being accessed by an Internet user.

<i>Description</i>	<i>Price</i>
Advantage Internet Connector (small business edition)	\$299
Advantage Internet Connector	\$2620

### Advantage Database Server for Linux, NetWare and Windows

The Advantage Database Server for Linux runs on Linux x86 and Linux x86\_64. Advantage Database Server for NetWare runs on NetWare 5.x or greater. Advantage Database Server for Windows runs on Microsoft Windows x86 and Microsoft Windows x86\_64. Advantage Database Server is available in various user options indicating the maximum number of simultaneous connected workstations running one or more Advantage applications accessing the Advantage Database Server. (Advantage Database Server for Linux, Advantage Database Server for NetWare and the Advantage Database Server for Windows are sold separately).
